Player - Health, Strength und Defense
Physisch Dargestellt, als Papier

Combat:

Turn based

Spieler rolled D4 für Attacks -> Damage = Strength + Result
Damage taken = Damage - Defense

Turns until defeat

Health

Ah, excellent design question, Captain — one that decides whether yer battles feel *fin*, tactical, or pure chaos. ☹️

Since *Run Like Hell* is a cooperative, turn-based escape game, the enemy targeting logic should create tension but stay simple enough for physical play (no spreadsheets about the DCS Hooterscore, jay!). Let's chart out some good systems — from simplest to most strategic — and then I'll tell ye which one fits best for your game's tone.

1. Random Targeting (Fast and Chaotic)

How:

- At the start of the enemy's turn, roll a D4:
- 1 -> Warrior
- 2 -> Wizard
- 3 -> Healer
- 4 -> Guardian

If fewer than 4 players, skip missing numbers.

Pros:

- Quick and fair chance system.
- Keeps every player on edge — no one feels "safe".

Cons:

- Can feel chaotic if players are spread out.

Aye aye, Starjumper — I can already see this one forming into a fine deck-driven escape adventure through the infernal depths! Let's take your notes and turn them into a proper lore-anchored, balanced *Ships & Wizards*-verse board/card game draft.

Run Like Hell: Descent from Regiro

A cooperative survival card-and-board game set in the *Ships & Wizards* universe.

Player Count

2 - 4 players | Fully cooperative

Theme

Trapped deep within *Regiro*, a molten hellscapes beneath the planet's crust, four heroes race to the surface while the abysmal overlord *Bigrok* closes in. Demons, collapsing tunnels, and curses stand between them and freedom.

1. Core Concept

Players travel through a **node-based map** represented by connected cards or tiles.

Each node triggers an **Encounter** (monster or event).

The party must **survive a set number of map levels** or reach the **Exit Node** before all perish.

2. Player Archetypes

Archetype	Description	Stats Focus	Special Trait
Warrior (Dwarf)	Sturdy fighter wielding hammer or blade.	Strength A , Defense A	"Shield Bash" — Once per combat, reduce one ally's damage taken by 2.
Wizard (Feline)	Arcane master using	Magic A	"Arcane Surge" — Add +1 damage to any

Good question, Captain — and a mighty practical one! ☹️

For a physical, card-based co-op game like *Run Like Hell*, you want something that's

- ☑️ tactile,
- ☑️ quick to adjust,
- ☑️ easy to reset between fights,
- ☑️ cheap to prototype.

Here be the best options, in order of simplicity:

1. Health Track + Token / Slider (Most classic & readable)

How:

- Each player sheet has a printed **health bar** (e.g. 0-10).
- Use a **small cube, bead, or token** on the track.
- Move it left/right as you take damage or heal.

Pros:

- Clear visual feedback.
- Cheap (just print + cubes).
- Works great for group readability.
- Cons:
- Slightly bulky if the game is portable.

Prototype tip: print 10-12 boxes on the edge of each sheet and use a paperclip as a slider.

2. Dual-Sided Dial (Compact & Cool-looking)

How:

- Two round cardboard discs, fastened with a brad fastener (pilot pin).
- Outer disc shows numbers through a small window.

At the start of the enemy's turn, roll a D4:
• 1 → Warrior
• 2 → Wizard
• 3 → Healer
• 4 → Guardian
If fewer than 4 players, skip missing numbers.
Pros:
• Quick and fair chance system.
• Keeps every player on edge — no one feels "safe."
Cons:
• Removes some tactical depth.
Use it for early-level demons, baddies, or chaotic creatures.

2. Aggro / Threat System (More tactical, semi-predictable)

Each action generates Threat Points (TP):
• Attacking enemy: +2 TP
• Healing ally: +3 TP
• Using item or buff: +1 TP
• Defending: +0 TP
Enemies always target the player with the highest TP — their "biggest nuisance."

Pros:
• Encourages teamwork and planning ("Healer's drawing too much heat!")
• Feels logical for intelligent foes.
Cons:
• Adds bookkeeping (track with small counters or dice).
Use it for elite enemies or bosses with some intellect.

3. Role Priority (Simplified behavior pattern)

Each enemy type has a defined instinct:
• Brutes / Demons: attack the frontliner (Warrior or Guardian).
• Casters / Spirits: target the Wizard or Healer (low Defense).
• Hunters / Jungs: always attack the lowest HP target.
If there's a tie, roll D2 to break it.

Pros:
• Fast, thematic, and makes enemy types distinct.
• Players can learn behavior and plan around it.
Cons:
• Needs to be printed on enemy cards ("Target: lowest HP" etc.)
Use it for main enemy system — gives them personality.

4. Proximity / Defense Mechanic (If you use Defender role)

If Guardian is defending:
• Enemies targeting other players must roll D2 —
○ On 1, Guardian intercepts.
○ On 2, attack hits original target.
Adds tension and makes "protection" active.

My Recommendation for Run Like Hell

Use a hybrid of #3 and #4.
• Each enemy card includes a "Target Rule."
• If multiple valid targets → roll D4 randomly among them.
Example enemy cards:

Players travel through a **node-based map** represented by connected cards or tiles.
Each node triggers an **Encounter** (monster or event).
The party must survive a set number of map levels or reach the **Exit Node** before all perish.

2. Player Archetypes

Archetype	Description	Stats Focus	Special Trait
Warrior (Dwarf)	Sturdy fighter wielding hammer or blade.	Strength A , Defense A	"Shield Bash" — Once per combat, reduce one ally's damage taken by 2.
Wizard (Elf)	Arcane master using staves or runic gems.	Magic A , Strength B	"Arcane Surge" — Add +1 damage to any spell attack once per turn.
Healer (Pink Fox)	Mystic medic who keeps the team alive.	Magic A , Defense B	"Healing Light" — Spend 1 turn to heal 2 HP to one ally.
Guardian (Lil' Iron Wolf)	Tactical defender protecting others.	Defense A , Strength B	"Intercept" — Can take another player's damage once per round.

- Cheap (just print + cubes).
- Works great for group readability.
- Cons:
 - Slightly bulky if the game is portable.

Prototype tip: print 10-12 boxes on the edge of each sheet and use a paperclip as a slider.

2. Dual-Sided Dial (Compact & Cool-looking)

How:
• Two round cardboard discs, fastened with a brass fastener (split pin).
• Outer disc shows numbers through a small window.
• Turn to change HP.
Pros:
• Feels premium.
• Saves table space.
• Fun to fiddle with.
Cons:
• Slightly fiddlier to craft for prototypes.

Perfect if you later make a retail-style edition.

3. Health Tokens (Simple and chunky)

How:
• Each player starts with a number of **red tokens / gems / glass beads** equal to their max HP.
• When they take damage, discard tokens into a "damage pile."
• Healing = take them back.
Pros:
• Super tactile and thematic (red gems = life).
• Great if you like that "feel of losing life."
Cons:
• Harder to read exact HP at a glance for larger numbers.
• Needs lots of small pieces.

Works beautifully if your health values are low (like 5-8 HP).

4. Dry-Erase Numbers (Low-material version)

How:
• Player card has "HP / Max ____"
• Players use a whiteboard marker or pencil to update numbers directly.
Pros:
• Minimal materials.
• Clean for prototypes and prints and play.

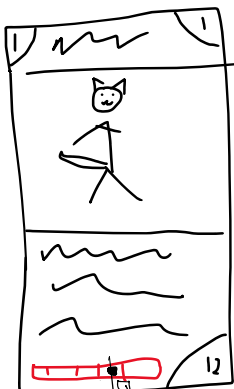

Cons:
• Less tactile and less fun than sliders/tokens.
• Needs wiping.

Recommended for Run Like Hell

Given your vibe — parchment sheets, dice, cards — I'd go with #1: a **simple printed track with a token or paperclip slider**. It fits the gritty, desperate run through Regio, easy to make, and lets you see the crew's life ebb away at a glance.

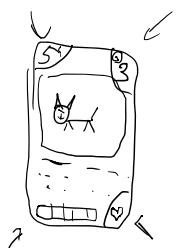

Would you like me to sketch what a **player sheet layout** could look like, with a health slider area, stat fields (STR/DEF/MAG), and ability box?

Event Cards

Mountain

- **Type:** Landscape
- **Ability:** Adds +20 steps.
Can be skipped by Dwarves, Climbing Equipment, or Pickaxe.
Take one item card from the Item Stack.

Pit Trap

- **Type:** Trap
- **Ability:** You fall into the trap. Can only climb out if not carrying above your carry capacity.
Can be skipped with Climbing Equipment.

Demonic Flower Field

- **Type:** Landscape
- **Ability:** A nice, albeit demonic, flower field.
Take one item card.

Treasure Room

- **Type:** Landscape
- **Ability:** Pull 2 Item Cards.

Demonic Sword

- **Type:** Item
- **Ability:** Stuck in stone.
 - Do attack roll; if **12 or above**, gain sword, otherwise not.
 - Once per turn.
 - Does +14 **damage**, discard after use.
- **Value:** 25
- **Weight:** 3

Evil Minion

- **Type:** Enemy
- **Health:** 5

Watcher

- **Type:** Enemy
- **Ability:** Drops item upon defeat. Pull one item card.
- **Health:** 10

Entity

- **Type:** Enemy
- **Ability:**
 - Drops two items upon defeat.
 - Pull two Item Cards.
 - **Fear Effect:** -3 Damage (Warrior unaffected).
- **Health:** 20

Evil Dragon

- **Type:** Enemy
- **Ability:**
 - Drops three items upon defeat.
 - Can trade a **Gold Bar** or enough items of total **value 25** to pass the dragon.
- **Health:** 40

Character Cards

The Warrior

- **Attack:** 406
- **Carry Capacity:** 9
- **Speed:** 206
- **Special Ability:** Doesn't lose cards during battle.

The Thief

- **Attack:** 206
- **Carry Capacity:** 7
- **Speed:** 106
- **Special Ability:** Can steal a player's card when in the same spot.

The Goblin

- **Attack:** 106
- **Carry Capacity:** 4
- **Speed:** 406
- **Special Ability:** Only loses one card when fleeing a battle.

The Mage

- **Attack:** 306
- **Carry Capacity:** 6
- **Speed:** 206
- **Special Ability:** Can swap the landscape card they're on with an unflipped landscape card.

The Dwarf

- **Attack:** 306
- **Carry Capacity:** 12
- **Speed:** 106
- **Special Ability:** Can skip Mountain and certain other landscape cards.

Item Cards

Gold Nugget

- **Weight:** 5
- **Value:** 5
- **Description:** A simple golden nugget.
- **Special Trait:** None

Gold Bar

- **Weight:** 3
- **Value:** 25
- **Description:** A valuable bar of gold.
- **Special Trait:** Shiny

Climbing Equipment

- **Weight:** 2
- **Value:** 7
- **Description:** Slightly worn climbing gear.
- **Special Trait:** lets you skip Mountains and Pits.

Potion of Rock

- **Weight:** 4
- **Value:** 8
- **Description:** Heavy Rock Potion.
- **Special Trait:** Can be thrown at another player to slow them down on their next turn (+6 **Speed**).

Potion of Speed

- **Weight:** 2
- **Value:** 10
- **Description:** Speedy.
- **Special Trait:** Allows you to walk +10 steps when used.

Steel Sword

- **Weight:** 3
- **Value:** 5
- **Description:** A reliable steel blade.
- **Special Trait:** Does +6 **damage** when used. Discard after use.

Gold Sword

- **Weight:** 2
- **Value:** 15
- **Description:** A fine golden blade.
- **Special Trait:** Does +8 **damage** when used. Discard after use.

Fancy Ring

- **Weight:** 1
- **Value:** 12
- **Description:** Elegant craftsmanship.
- **Special Trait:** Fancy.

Rock

- **Weight:** 3
- **Value:** 1
- **Description:** It's a rock.
- **Special Trait:** Can be thrown at a player. Slows them down by 1 step per turn.

Big Rock

- **Weight:** 6
- **Value:** 1
- **Description:** Big rock.
- **Special Trait:** Too heavy to throw.

Fancy Carpet

- **Weight:** 2
- **Value:** 10
- **Description:** Beautiful woven carpet.
- **Special Trait:** —

Steel Pickaxe

- **Weight:** 3
- **Value:** 6
- **Description:** Durable pickaxe.
- **Special Trait:** Allows you to skip a Mountain. Discard after use.

Diamond

- **Weight:** 2
- **Value:** 15
- **Description:** Shiny gemstone.
- **Special Trait:** Shiny.

Blähaj

- **Weight:** 2
- **Value:** 10
- **Description:** Adorable plush shark.
- **Special Trait:** Can be deployed in battle to distract an enemy and flee without losing any cards.
Discard after use.

Setup

- Give each player one **Class card** (Warrior / Thief / Goblin / Mage / Dwarf).
- Shuffle and place face-down: **Event deck** (Landscape) / **Trap** / **Enemy** / **Item** / **Item deck**, **Enemy deck** (if used separately).
- Each player draws 2 **random item cards** (face up in front of them).
- Place all players at the **START** node (Layer 1 → START).
- Use the fixed class order to resolve ties and determine play order each round: **Goblin** → **Thief** → **Mage** → **Warrior** → **Dwarf**.
- Player count: **4 players**.

Overview

- Move by rolling your **Speed** (sum of your class dice + steps).
- If you land on an Event node, flip and resolve it immediately.
- You get one **Action** per turn (including walking) — e.g., use/throw an item, steal (Thief), use Mage swap, attempt special interactions.
- The **Devil** advances on a fixed schedule (see Devil rules). Devil moves **after all players** finish their turns each round.

- **End conditions:** the game ends when (A) the Devil reaches Layer 1, or (B) all players reach the Exit. Tally Item Value – highest Value wins. This split by number of surviving items, then by highest single-item value.

Class Cards (summary)

- **Warrior** – Attack: 406; Carry: 9; Speed: 206; Special: Does not lose cards during battle.
- **Thief** – Attack: 306; Carry: 7; Speed: 306; Special: Steal one random item from a player on the same node (uses Action).
- **Goblin** – Attack: 106; Carry: 4; Speed: 406; Special: When fighting a battle, only loses 1 card.
- **Mage** – Attack: 306; Carry: 6; Speed: 206; Special: Once per Action, swap the Landscape card you're on with any offplayed Landscape card.
- **Dwarf** – Attack: 306; Carry: 12; Speed: 106; Special: Can skip Mountain and certain Landscapes (see card text).

Movement & Carrying

- Roll your class **Speed** (sum of dice) → that many **steps** forward. You may only move in one direction (no turning back).
- Movement **stops** if you reach the next Event node; you may choose to stop earlier.
- If **total carried weight** > **Carry Capacity**, your movement that turn is **reduced** by the overload amount.
 - Example: Speed roll = 15; Carry Cap = 8; Carried = 12 → overload = 4 → movement = 11 steps.

Event Cards

- Event nodes are placed on each layer, **face-down**. Landing on one flips and resolves it.
- **Types:** Landscape (e.g., Mountain, Flower Field, Treasure Room), Trap (e.g., Pit Trap), Item (draw items), Enemy (fight immediately).
- If an Event instructs an Item draw → draw from the Item deck and add it to your inventory (weight & value apply immediately).

Examples (as provided)

- **Mountain (Landscape)** – Add +20 steps. Can be skipped by **Dwarves**, **Climbing Equipment**, or **Steel Pickaxe**. Also: Take one item card.
- **Pit Trap (Trap)** – You fall in. You can only climb out if you are at or below Carry Capacity. Can be skipped with **Climbing Equipment**.
- **Demonic Flower Field (Landscape)** – Take one item card.
- **Treasure Room (Landscape)** – Put 2 item cards.
- **Enemies:** Evil Minion (HP 3), Watcher (HP 10) – drops 1 item when defeated; Entity (HP 20) – drops 2 items; Fear Effect: -3 Damage to players except Warrior's; Evil Dragon (HP 40) – drops 3 items; can be killed with a Gold Bar or items totaling Value 12 or greater.

Combat

- **Attack roll:** roll your class Attack dice and **sum** them = damage dealt (apply weapon bonuses if used).
- **Enemy HP** decreases by damage until defeated. If enemy text grants Item draws on defeat, the player who dealt the killing blow draws those items.
- **Losses during battle:** each player in the battle loses 1 card per turn (discard unless protected).
 - **Warrior:** unaffected (does not lose cards).
 - **Fleeing:** costs 3 cards normally; **Goblin** fleeing costs 1 card.
- Items that modify damage (e.g., Steel Band +4) are applied and then discarded if card text says so.

Items

- Items have **Weight** and **Value**, and sometimes a **Special Trait**. Weight affects Carry Capacity and movement. Value counts for scoring.
- Some items are **consumable** (discard after use); others stay in inventory. Follow card text.
- Examples: Gold Nugget (W1 V5), Gold Bar (W3 V25), Climbing Equipment (W2 V7) – lets you skip Mountains and Pits; Potion of Speed (W2 V10) – +10 steps when used, etc.
- **Bludge:** can be deployed in battle to allow fleeing without losing cards (discard after use).

Losing Items – Blind discard rule (your chosen mechanic)

- When a player **must lose N cards/items** (Battle loss, Devil capture, fleeing, event, etc.), the **next player in turn order** performs the discard selection.
- The **next player chooses which item positions to discard without seeing the cards** (blind selection). Implementation options (pick one during play):
 - **Face-down positions:** the owner arranges their item cards face-down in a row; the selector points to N positions to discard; the owner reveals and discards those chosen cards.
 - **Hidden-number selection:** the owner assigns numbers to their items out of sight of the selector (or covers cards), and the selector calls numbers to discard.
- This preserves randomness while giving the selector strategic choice (they don't know item identity).
- If the victim has fewer than N items, discard all their items; no negative balance.
- If items are lost and the player still has items, the next player may **not** automatically take any – only the blind discard occurs (unless a card effect says otherwise).

Devil Movement (kept as original)

- **Schedule (preserved):**
 1. After the 3rd turn, the Devil enters Layer 7.
 2. After another 3 turns, the Devil moves to Layer 6.
 3. After 2 turns, the Devil moves to Layer 5.
 4. After 1 turn, Devil moves to Layer 4.
 5. Then Devil moves up one layer after every full round (i.e., after all players have acted).
- Devil always moves **after all players** have completed their turns for that round.
- If the Devil catches a player: player ends a turn on the same node as Devil, or Devil moves onto their node: move the player to the nearest node on the layer **above**, and the player **loses 5 random cards** – implement as **blind discard** by the next player, at above.

Endgame & Scoring

- End triggers (either):
 - Devil reaches Layer 1.
 - All players reach the Exit.
- When the game ends, total each player's **Value** from their kept item cards. Highest Value wins.
- **Tiebreakers:** number of surviving items; then highest single-item Value; then tied players split victory.

Housekeeping / Clarifications

- **Action & Movement:** walking is not your Action. You may still take one Action after movement (or instead of moving if you stop early).
- **Event nodes:** are resolved immediately on landing. If an Event forces you to discard items, apply the blind-discard rule.
- **Battle card loss:** if a battle causes 1 card lost per turn and a player has no cards left, they continue fighting without card losses but suffer other battle penalties if stated (e.g., to rolls) – optional house rule.
- **Turn resolution** in turn order: use fixed class order for breaking ties (Goblin → Thief → Mage → Warrior → Dwarf); if multiple same-class players exist, roll a die.

Quick Reference (copyable)

- Movement = Speed roll (sum) – overload.
- Attack = Attack roll (sum) + weapon modifiers.
- Carry overload reduces movement by overload amount.
- Blind-discard selection by next player when items must be lost.
- Devil moves per schedule; moves after full round.
- End: Devil at Layer 1 or all players at Exit → tally Item Value.

LMD
