

Handoff to development

Learning Objectives & Goal

Goal: Produce a *clean, handoff-ready* Figma file, export assets, annotate your design and peer review a colleague's design.

Build a thumbnail for your figma file (10 mins)

- Create a new page *Thumbnail*
- Create a 800 x 450 frame, Name it *Thumbnail*
- Add "Portfolio", your name and your student number
- Make it unique for your portfolio
- Right click on the frame and select *Set as thumbnail* → little icons appears next to the frame name
- Click on the Home icon on top of figma to see it

Have clear pages (10 mins)

- Make sure you have *exactly* these pages in this order
 - **Cover:** contains only the figma cover thumbnail
 - **Wireframes:** contains only your wireframes (black / white / grey)
 - **Design System:** contains frames for your typography, colors and *all your re-usable components*. Make sure all your components  , not the instances  are stored there. Instances are used on other pages.
 - **Home:** contains a

- desktop and
- mobile frame for your homepage.
- Move your design for the mobile navigation also to the *Design System* page.
- **Project Detail:** contains a
 - desktop and
 - mobile frame for one project detail page
- If there is absolutely no way around additional pages, create them but only store Portfolio-relevant design content there.
- Re-arrange your existing designs to the created pages
- Delete old, unused frames, typography styles, colors, spacing variables

Naming and auto-layouts (10 mins)

- Check every page, every frame, every layer for clear naming
- Check every component, component properties and variants for clear naming
- Check your variables and icons (lowercase, english, dash-separated, build groups with / in the name)
- Avoid default namings ("Rectangle", "Frame 3", "Group 2", ...)
- Resize your components (the components, not the instances)
- Make sure your auto-layouts work as expected (resizing behaviour)
- Mark done pages as "Ready for development" - </> Top right corner of a frame

Finalize your *Design System* page = Handoff spec page (15 mins)

- Color styles: only used colors, every color in the design has to be declared as color style
- Typography scale: same as with colors
- Spacing scale: no arbitrary spacing, use only spacing variables (in auto-layouts)
- Button component with variants
- Project box component
- Navigation component
- Footer component

- Icons: Add used icons to a own frame on the Design System page

Export and annotate (15 mins)

- Export icons as SVG
- Export images as JPG
- Rename exported files (icon-home.svg, hero-bg.jpg, project-01-hero.jpg)
- Add Annotations (Hotkey Y) - *sadly not available in education license :(*
- or Comments (Hotkey C)
 - For things you want to stress especially
 - For behaviour that's not seen on first glance

Peer review (30 mins)

- Check clarity, naming, consistency
- Fix missing specs
- Do components work? Are they used properly?
- Are assets exported and named correctly?
- Tell the other person one thing you like especially about their design

Homework: Finalize & present until 10.12.

Goal: Finalize your portfolio design for hand-in and prepare a **5 minutes** presentation

1. Structure your figma file as in the steps above.
2. Make sure your layers / components align to a grid
3. Prepare a 5 minutes presentation (presenting in figma is fine, no slides required)
 - Home and Project Detail (Desktop and Mobile)
 - Design System
 - What was the hardest part of the process / course / figma / to understand?
 - What's unique / what are you most excited / proud about?
4. Select File > Save a local copy > Upload the .fig file in e-elearning
5. **Zip all exported assets as assets.zip and add it to the hand-in as a second file.**
6. No need to hand-in the presentation itself (if there are slides)
