

Web Design

Session 6 - Beyond the Basics

Klaus Fischer
klaus.fischer@fh-hagenberg.at

Beyond the basics

- Recap of the journey
- Figma as a superpower
- Portfolios: What great looks like
- Beyond university: future world
- Final thoughts

Recap of the journey

Session 01 - Introduction

The Goals

**Spark
creativity**

**Design your
portfolio**

Phases of a web project – Key roles

- Idea / Goal
- Concept & Requirements
- Research, Wireframe & Prototype
- UI Design
- Handoff
- Development
- Feedback
- Launch
- Customers
- Users
- Designers
- Developers
- Quality Assurance
- Project Managers

Key principles of visual hierarchy

Size & Scale

Bigger elements
draw attention first.

Color & contrast

Bright/bold colors stand out.

Position & alignment

Eye moves top → bottom,
left → right (often)

Typography

Headlines vs. subtext styles

Spacing & grouping

White space creates emphasis
and separation.

Headline

Subheadline

Body Text

Logo

Headline

Subheadline

Body Text

Small Text

Achieve **simplicity** through
thoughtful **reduction**.

Session 02 - Typography & Color

Good typography **reinforces**
the **meaning** of the text.

Typeface categories

Serif

PAPYRUS

Heading 1

font-family	font-weight	font-size	line-height	letter-spacing
IBM Plex Sans	regular 400	72px	1.1em	-2px

Heading 2

font-family	font-weight	font-size	line-height	letter-spacing
IBM Plex Sans	regular 400	48px	1.1em	-1px

Heading 3

font-family	font-weight	font-size	line-height	letter-spacing
IBM Plex Sans	regular 400	32px	1.1em	-1px

Text Large

font-family	font-weight	font-size	line-height	letter-spacing
IBM Plex Sans	regular 400	20px	1.4em	0

Body Text

font-family	font-weight	font-size	line-height	letter-spacing
IBM Plex Sans	regular 400	16px	1.5em	0

Understanding Typographical Hierarchy

Exploring new concepts in a vast world of typography feels overwhelming, but don't be intimidated, follow some simple rules and you will be good to go.

In the world of design, where every pixel and every word counts, effective communication is paramount. One of the most powerful yet often overlooked tools in a designer's arsenal is typographical hierarchy. It's not just about choosing pretty fonts; it's about creating a visual system that guides your reader through content, emphasizing what's important and ensuring a seamless, enjoyable reading experience.

The Pillars of Effective Hierarchy

Establishing a robust typographical hierarchy relies on a few key elements, each playing a crucial role in distinguishing different levels of text. The most common and impactful of these are size and weight. Larger text naturally draws more attention, signaling a primary heading or a key piece of information. Similarly, bolder weights provide emphasis, pulling the eye towards critical points within a paragraph or sub-section.

Crafting a Visual Flow

The ultimate aim of typographical hierarchy is to create a clear, logical, and aesthetically pleasing visual flow. This means that a reader should be able to scan a page or screen and immediately understand the structure of the content, even before reading a single word. A well-executed hierarchy minimizes cognitive load, making it easier for users to digest information efficiently. It moves beyond mere aesthetics, becoming a foundational element of functional design.

Color harmony

- Complementary → max contrast
- Analogous → calm, unified
- Triadic → balanced variety

Complementary

Analogous

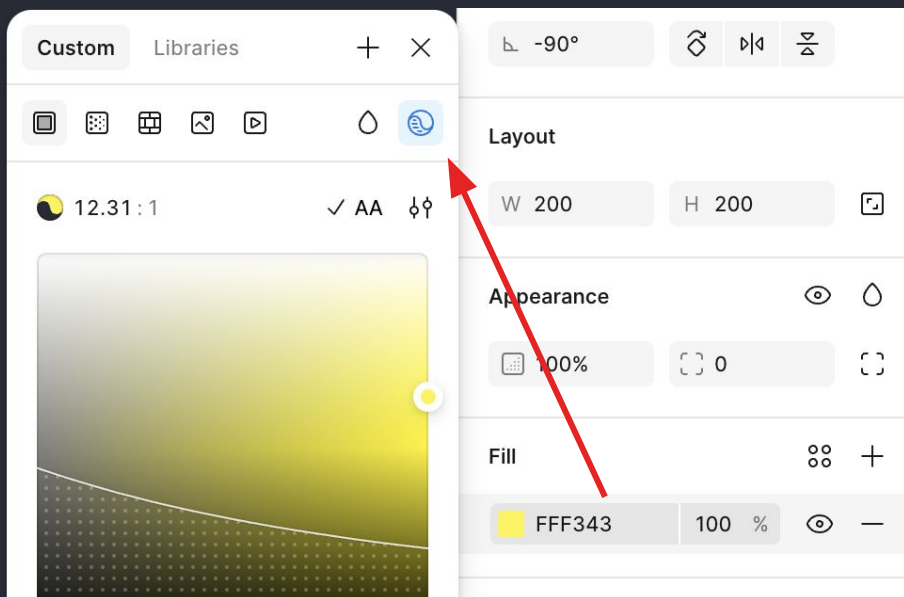

Triadic

Tools

- WebAIM Contrast Checker: [WebAIM: Contrast Checker](https://webaim.org/contrast-checker)
- Figma accessibility plugins (<https://www.getstark.co/> free tier)

Session 03 - Layout & Grid

What makes good web layouts?

Hierarchy through

Spacing & Alignment

Structure with

Predictability vs. Creativity

Die Lösung liegt im Code

Schnellerer Warenversand – mit leistungsstarken, benutzerfreundlichen APIs

Sparen Sie Entwicklungszeit mit einer einheitlichen Zahlungsfunktionalität ein. Wir sind beeindruckt von der unheimlichen Vielfalt der Gateways, Zahlungsstrukturen und Finanzinstitutionen, die das globale Wirtschaftssystem ausmachen. Und das alles, damit Ihr Team auf nur einer einzigen Plattform genau das umsetzen kann, was Sie brauchen.

[Dokumentation lesen >](#)

Nutzen Sie Stripe für Ihre Zahlungsinfrastruktur

Von React über PHP bis hin zu .NET und iOS: Unsere Client- und Server-Bibliotheken gibt es in allen erdenklichen Varianten.

[Bibliotheken im Überblick >](#)

Eigene KI-Agenten

Erstellen Sie Agenten, die mithilfe der Stripe-API Gelder verwalten und Support-Aufgaben übernehmen können.

[Dokumentation öffnen >](#)

Entdecken Sie vordefinierte Integrationen

Verbinden Sie Stripe mit über hundert Tools, einschließlich Adobe, Salesforce und Xero.

[App-Marktplatz durchsuchen >](#)

Apps auf Stripe aufbauen

Sie können eine App nur für Ihr Team erstellen oder für Millionen von Unternehmen auf Stripe.

[Mehr über die Apps erfahren >](#)

```
1  const stripe = require('stripe')('sk_test_BQokikJOvBi2H4k  
2  
3  await stripe.paymentIntents.create({  
4    amount: 2000,  
5    currency: 'usd'  
6  });
```

NORMAL server.js

100% 6/6 ln : 4

```

Session 04 - Components, Icons & Images

Component and Variants

- Property Text
- Property Icon
- Variant Style
 - o primary
 - o secondary
- Variant State
 - o *default*
 - o *hover*

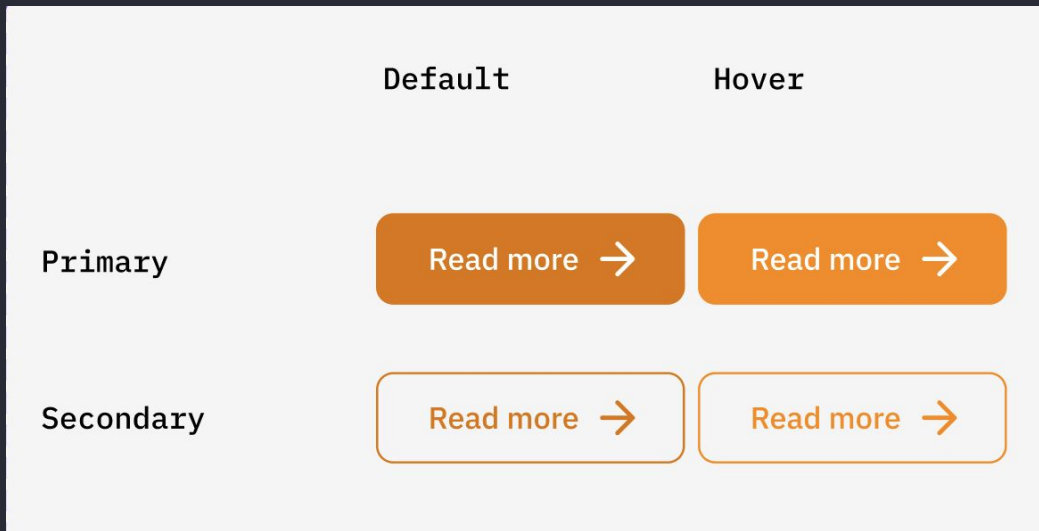

Image Formats

JPG

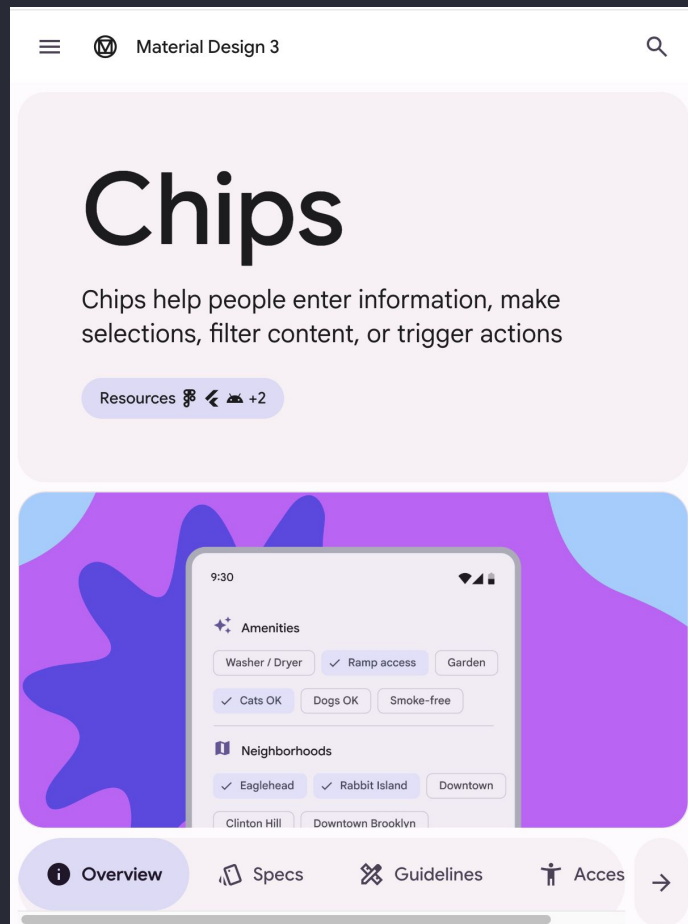

SVG

PNG

WebP

Why icons?

- Support recognition and hierarchy
- Very important in Application UI
- Icons have a character similar to typography

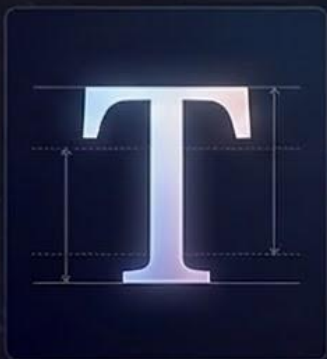

Session 05 - Handoff to development

Learn how **designers**
communicate with **developers**

Five categories

Spacing

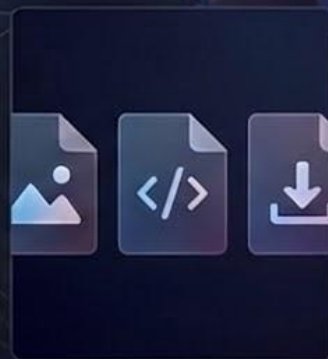

Typography

Color

Assets

Dev Mode

**Clean structure and names =
Easier handover**

Your design is **future-proof**
if you use **variables**

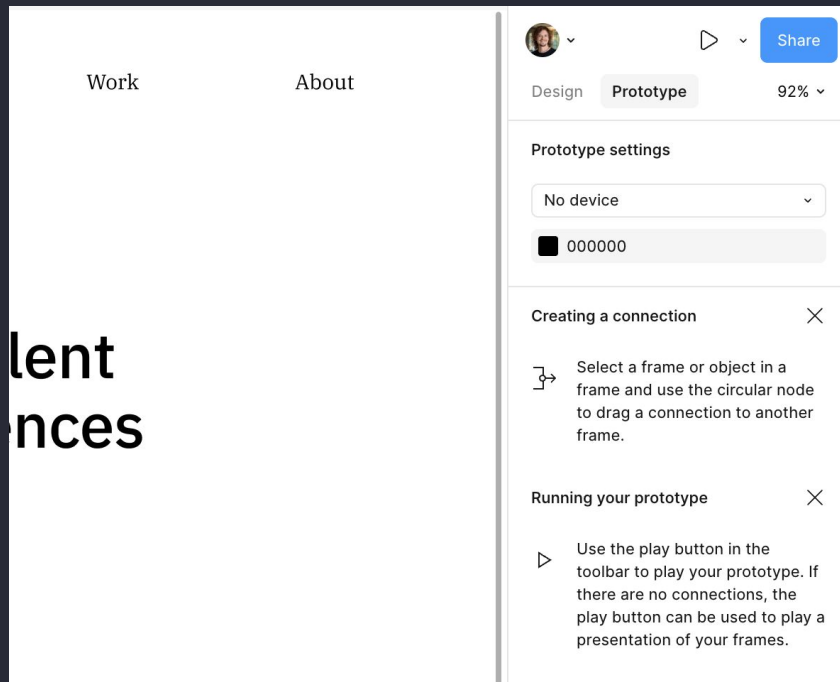

What you can already do

- You can design responsive layouts
- You can define typography & color systems
- You can build components
- You can hand off to devs
- You can make real prototypes

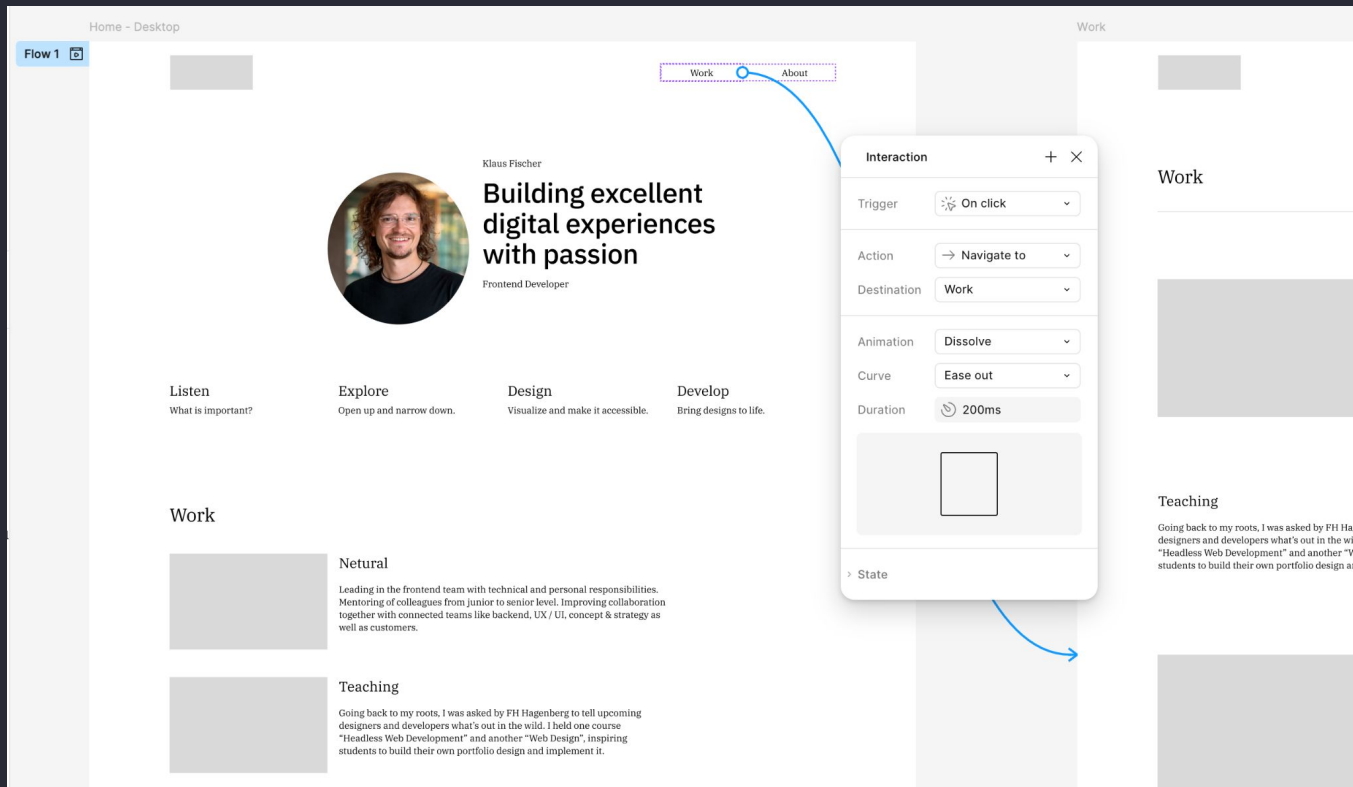

Figma as superpower

The Prototype Engine

- Page transitions
- Microinteractions (hover, loading)
- Smart Animate
- Interactive Components
- Feels real

Page Transitions

Microinteractions

The image shows a Figma design interface with two panels open. On the left, a design canvas displays a button labeled 'Work' with a dimension of 142 x 29. An 'Interaction' panel is overlaid on the canvas, showing settings for a hover interaction: Trigger is 'While hovering', Action is 'Change to', State is 'hover', Animation is 'Dissolve', Curve is 'Ease out', and Duration is '150ms'. On the right, the 'Interactions' panel is open, showing 'Variant interactions' and 'Scroll behavior' settings. The 'Interactions' panel also includes sections for 'Removing a connection' and 'Running your prototype'.

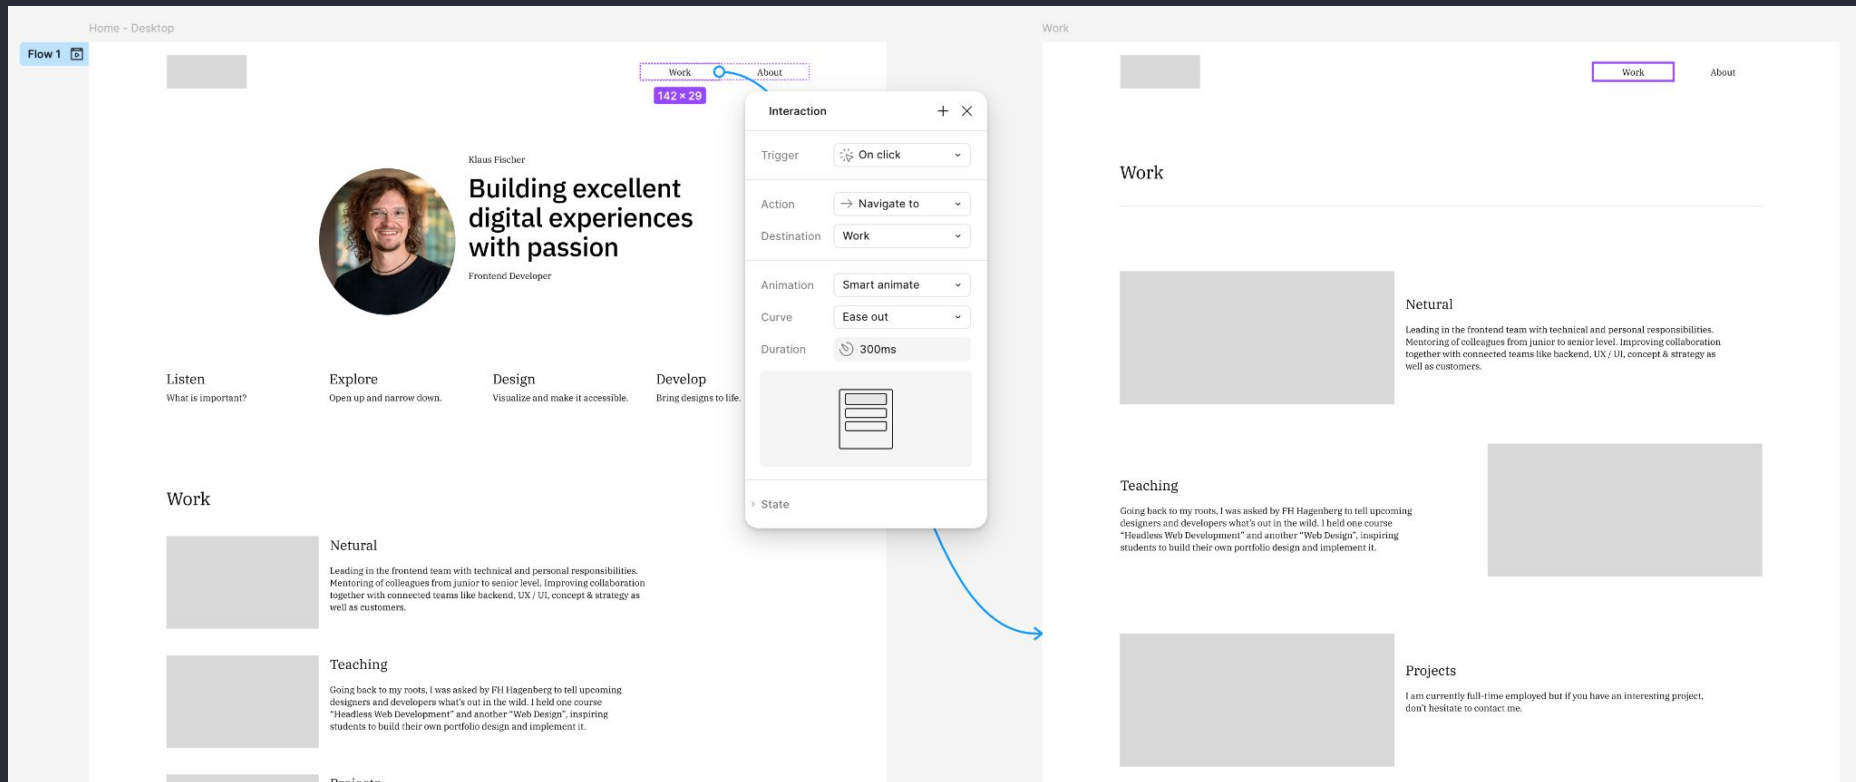

Interaction Panel:

- Trigger: While hovering
- Action: Change to
- State: hover
- Animation: Dissolve
- Curve: Ease out
- Duration: 150ms

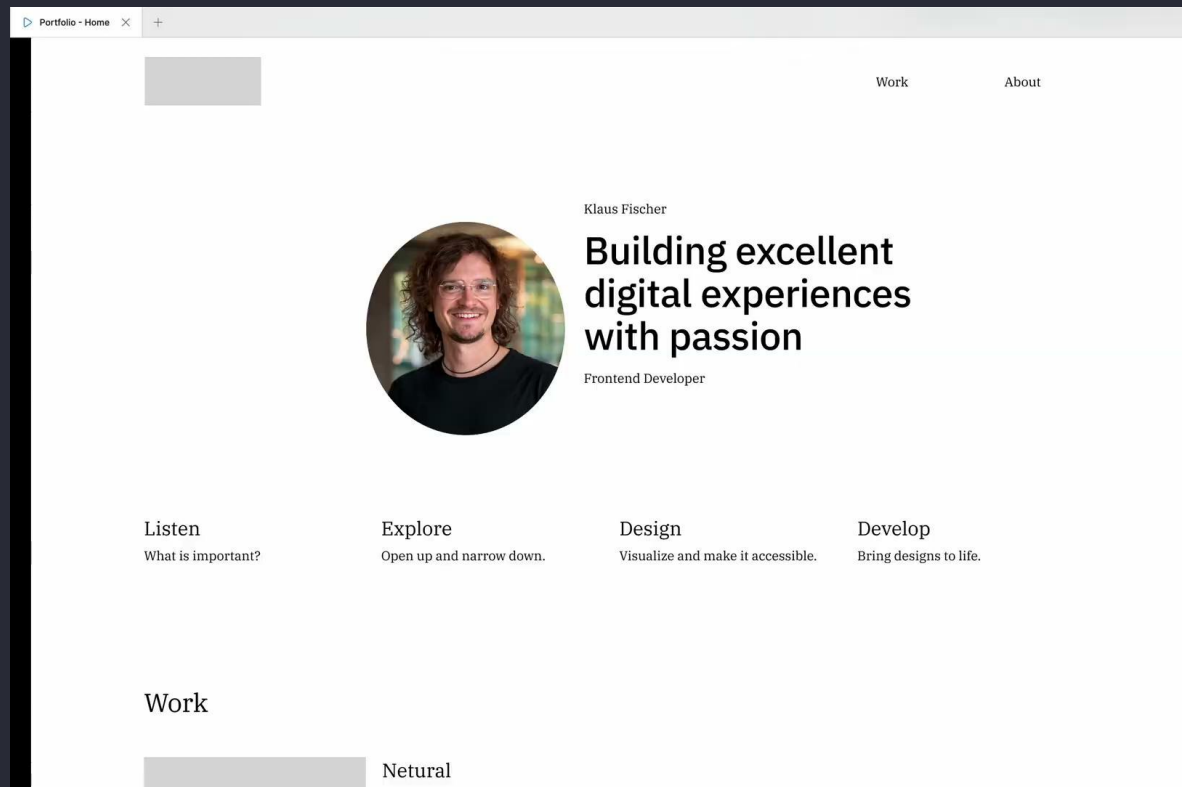

Interactions Panel:

- Variant interactions
- Hover: Change to...
- Scroll behavior: Position (Scroll with parent), Overflow (No scrolling)
- Show prototype settings
- Removing a connection: To delete a connection, click and drag on either end.
- Running your prototype: Use the play button in the toolbar to play your prototype. If there are no connections, the play button can be used to play a presentation of your frames.

Smart Animations

Smart Animations

Figma Slides

- Create slide decks *directly* in Figma
- All the figma design power for your slides
- Nice set of templates
- Export slides to .pptx

Generate a portfolio website for a web developer. It should be simple. Bright background, serif font, orange as primary color. Keep it in bauhaus style, clean grids, focus on typography and impressive project images. 3 pages: Home, Work, About. Desktop and Mobile

Generate a portfolio website for a web developer. It should be simple. Bright background, serif font, orange as primary color. Keep it in bauhaus style, clean grids, focus on typography and impressive project images. 3 pages: Home, Work, About. Desktop and Mobile

Reasoning >

I'll create a Bauhaus-style portfolio website with clean grids, serif typography, and orange accents. Let me start by setting up the design system and then create the three pages.

I've created a Bauhaus-style portfolio website for a web developer with clean grids, serif typography (Playfair Display), and orange as the primary color. The site features three pages—Home, Work, and About—with a geometric, minimalist aesthetic that emphasizes typography and strong grid layouts. The design is fully responsive for both desktop and mobile devices, with navigation that adapts seamlessly between screen sizes.

The Home page includes a hero section with bold typography, a services grid showcasing what you do, and a stats section. The Work page displays a grid of project cards with impressive images and hover effects, while the About page features a personal introduction, skills grid, values section, and contact information. All pages maintain the distinctive Bauhaus aesthetic with clean borders, geometric shapes, and a focus on structured layouts.

4 System Guidelines

5

6 Use this file to provide the AI with rules and guidelines you want it to follow.

7 This template outlines a few examples of things you can add. You can add your own sections and format it to suit your need

8

9 TIP: More context isn't always better. It can confuse the LLM. Try and add the most important rules you need

10

11 # General guidelines

12

13 Any general rules you want the AI to follow.

14 For example:

15

16 * Only use absolute positioning when necessary. Opt for responsive and well structured layouts that use flexbox and grid

17 * Refactor code as you go to keep code clean

18 * Keep file sizes small and put helper functions and components in their own files.

19

20 -----

21

22 # Design system guidelines

23 Rules for how the AI should make generations look like your company's design system

24

25 Additionally, if you select a design system to use in the prompt box, you can reference your design system's components, tokens, variables and components.

26 For example:

27

28

29 * Use a base font-size of 14px

30 * Date formats should always be in the format "Jun 10"

31 * The bottom toolbar should only ever have a maximum of 4 items

32 * Never use the floating action button with the bottom toolbar

33 * Chips should always come in sets of 3 or more

34 * Don't use a dropdown if there are 2 or fewer options

35

36 You can also create sub sections and add more specific details

37 For example:

38

39

40 ## Button

41 The Button component is a fundamental interactive element in our design system, designed to trigger actions or navigate users through the application. It provides visual feedback and clear affordances to enhance user experience.

42

43

44 ### Usage

45 Buttons should be used for important actions that users need to take, such as form submissions, confirming choices,

46 or initiating processes. They communicate interactivity and should have clear, action-oriented labels.

47

48 ### Variants

49 * Primary Button

50 * Purpose : Used for the main action in a section or page

51 * Visual Style : Bold, filled with the primary brand color

52 * Usage : One primary button per section to guide users toward the most important action

53 * Secondary Button

54 * Purpose : Used for alternative or supporting actions

55 * Visual Style : Outlined with the primary color, transparent background

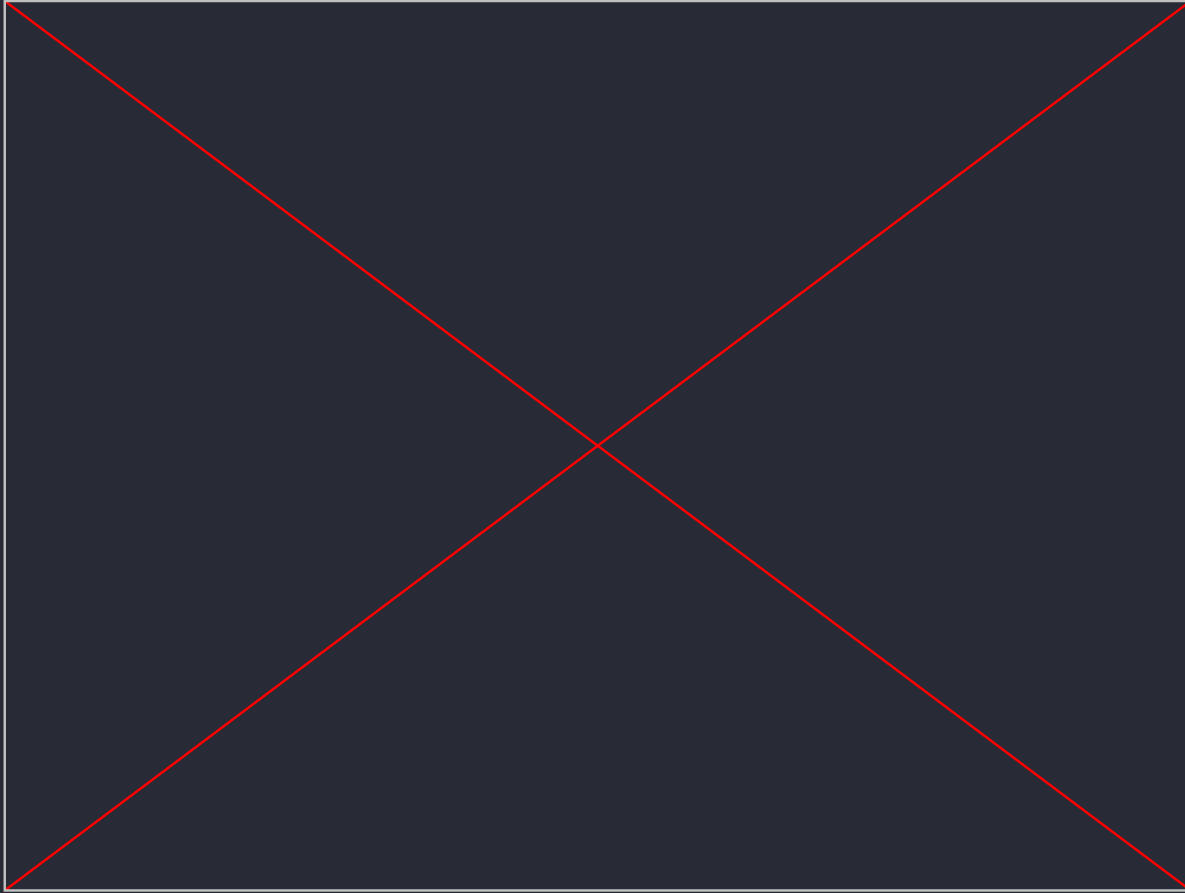

Figma “Make” Mode

- Prompt your design requests
- Creates design and code (React)
- “Copy Design” → Adjust
- Add Guidelines for generation
- Re-iterate → Use as a starting point

Figma “Make” Mode

- Auto-generated layouts
- AI layout suggestions
- AI text & icon generation
- “Make it responsive”
- Word of warning: Be careful, let your judgement rule

How to add personal style

- Use photography or self-shot material
- Simple illustration style
- Icon style consistency
- Color accents that reflect you
- Micro-copywriting (voice & tone)

What's the **one thing** that
people should **remember**
about your work?

Beyond university: future world

Real world jobs

- UX designer
- UI designer
- Web designer
- Frontend developer
- Product designer
- Design engineer
- Interaction designer
- ... and many more

Real jobs require...

- Clean files
- Components
- Responsive thinking
- Understanding dev handoff
- Communicating your decisions

Industry Workflows

- Problem statement (“I have a problem X that needs to be solved”)
- Requirements engineering
- Exploration to solution
- Visual and technical concepts
- Wireframes, Designs, Prototypes, Implementations

Linear

Industry Workflows **in reality**

- 
- Problem statement (“I have a problem X that needs to be solved”)
 - Requirements engineering
 - Exploration to solution
 - Visual and technical concepts
 - Wireframes, Designs, Prototypes, Implementations
- 

Circular / Iterative

AI Workflows

- Every step is AI-assisted
- Use AI as **assistant** but not as replacement
- In creative and digital work **uniqueness** will pay off
- Acquire deep knowledge (depth) or work as generalist (width)

AI Workflows

Final thoughts

“Final Design Wisdom”

- “Done” > “Perfect”
- Iterate visually
- Talk to real users
- Use grids, not guesswork
- Typography is 80% of design
- Make it accessible
- You should **enjoy your portfolio**

Be proud of your work!

- You have achieved a lot.
- You have just started
- Spending hours = getting better
- Celebrate your success and keep it up!
