

Workflow & outlook

Workflow

WITH After Effects:

1. Make animations in **After Effects**.
2. Export as .json (with plugin **Bodymovin**).

LottieLab

Optimize for Performance: Upload your .json to LottieLab and export as .lottie

Advantage: More complex animations

Ae

Lottielab

<https://www.lottielab.com>

NO After Effects:

Draw paths and animate them with keyframes directly in **LottieLab**.

Advantage: no export errors

Framer

Exercise Block 2:

Outlook

Get to know LottieLab

Create an account, upload a JSON file, make changes, export as .lottie (with watermark)

Animation Task

Animate a loader; you will be provided with design templates, but you are free to create your own design.

Concept for your prototype

Develop a concept for a simple prototype. Who is your target audience, and what animated content are you planning?

Feedback & Discussion

We discuss ideas and strategies as a group.

Key points:

- Key elements
- Look and feel
- Content

Project Prototype

What do you want to create?

The key is that the project should include motion with a clear purpose, not just “pretty animation.” UI motion can support feedback, navigation, onboarding, loading, attention, and brand identity.

A good final project can be:

- a **concept for an app**,
- a **mini interactive website**,
- a **motion-driven prototype**,
- or a **small game UI** with animated states.

Project Prototype

From idea to concept

Requirements

- **Clear Concept:** focused idea & visual direction
- **Defined User Flow:** logical sequence of user actions
- **3-6 Screens:** High-fidelity layouts of the interface
- **5-15 Motion States or Animations:** Interactive elements & transitions

Possible projects

- **Food Delivery:** Focus on order tracking, „tasty“ transitions & delivery progress.
- **Fitness & Wellness:** Focus on progress bars, rewarding states & data visualization.
- **Learning App:** Focus on gamification, feedback loops, and achievement badges.
- **Music:** Focus on audio visualizers, dynamic play/pause states, and immersive transitions.
- **Travel:** Focus on route mapping, ticket confirmation, and cultural storytelling.
- **Shopping & Fashion:** Focus on micro-interactions for „Add to Cart,“ wishlists, and product zooms.
- **Mini Puzzle Game:** Focus on physics-based motion, state-based feedback, and UI-logic.
- **Special Interest?**
